

SAMPLE DELIVERABLE

Gap And Options Analysis

A structured analysis package that converts findings into capability gaps, root causes, risk themes, options, priorities, and a practical action plan.

CLIENT PRIVACY

Client names and identifying details are anonymized.

DELIVERABLE TYPE

Gap register, maturity view, options analysis, action plan, and decision summary.

TYPICAL BUYER

Transformation leaders, program managers, CIO offices, and operational executives.

SITUATION

The team knew there were gaps, but not what to fix first.

Findings were spread across workshops, interviews, incident notes, and delivery observations. Leaders needed a structured view of gaps, impacts, options, and priorities.

ANALYSIS ISSUE

Findings were not grouped by root cause or business impact.

LEADERSHIP RISK

Action could focus on visible symptoms instead of the highest value fixes.

ACTION READINESS

Gaps are grouped, scored, and connected to options and practical next steps.

GAPS CAPTURED

26

Grouped by capability and impact.

HIGH PRIORITY

8

Need leadership attention.

OPTIONS

3

Stabilize, improve, transform.

ACTION OWNERS

12

Assigned by theme.

Start with stabilization gaps that reduce delivery risk, then move to process and operating model improvements.

Gap register with priority and recommendation.

The gap register converts observations into action oriented entries that can be owned and tracked.

ID	GAP	IMPACT	PRIORITY	RECOMMENDED ACTION
G 01	No single intake standard.	Incomplete work enters the pipeline.	High	Create minimum input checklist.
G 02	Decision ownership is unclear.	Open questions remain unresolved.	High	Assign decision owner by workstream.
G 03	Process exceptions are not tracked.	Repeat problems continue.	High	Create exception log and monthly review.
G 04	Reporting metrics are inconsistent.	Leaders cannot compare performance.	Medium	Define metric catalog.
G 05	Training material is outdated.	Users rely on informal guidance.	Medium	Refresh quick guides.
G 06	Vendor handoff lacks approved scope.	Estimate changes and rework increase.	High	Use vendor readiness checklist.
G 07	Requirements are not traced to business goals.	Low value scope can expand.	Medium	Add traceability view.
G 08	Risk reviews happen late.	Controls are added after design.	High	Add early risk gate.
G 09	Data ownership is fragmented.	Reporting and automation are delayed.	Medium	Assign data owners.
G 10	No formal benefit tracking.	Improvements cannot be defended.	Medium	Create baseline and benefits dashboard.
G 11	Escalation path is unclear.	Teams lose time resolving blockers.	Medium	Define escalation triggers.
G 12	Closeout lessons are not captured.	Improvement learning is lost.	Low	Add closeout review.

How this creates value

- Creates a prioritized action view.
- Connects gaps to business impact.
- Separates symptoms from root causes.
- Supports governance and progress tracking.

What this prevents

- Action plans with no priorities.
- Fixing symptoms only.
- Ignoring ownership gaps.
- Losing findings after workshops.

Gap impact and urgency matrix.

The visual makes it easier to see which gaps require immediate action and which can be sequenced later.

THEME	IMMEDIATE ACTION	LONGER TERM MOVE
Intake	Set minimum input standard.	Automate intake validation.
Ownership	Assign decision owners.	Create governance cadence.
Risk	Add early review gate.	Embed control design.
Metrics	Define core measures.	Build dashboard.
Training	Publish quick guide.	Create role based learning.

A gap analysis has value only when it creates clear choices about what to fix first.

Action controls and dependency view.

Each action needs an owner, dependency, and review rhythm so findings become progress.

ACTION	DEPENDENCY	OWNER	REVIEW
Create intake checklist.	Agreement on mandatory fields.	Operations lead	Weekly until launch.
Assign decision owners.	Workstream map.	Program sponsor	Biweekly.
Define metric catalog.	Reporting source review.	Data lead	Monthly.
Build vendor readiness checklist.	Procurement input.	Delivery lead	Before vendor release.
Add risk gate.	Risk criteria.	Risk lead	At intake and design.
Refresh training material.	Updated SOP.	Change lead	Before rollout.

Priority rules

- Impact
- Urgency
- Dependency

Governance

- Owner
- Review date
- Escalation

Evidence

- Baseline
- Progress
- Outcome

Gap closure roadmap.

0 TO 30 DAYS

Stabilize

- Minimum intake
- Owners
- Risk gate

31 TO 60 DAYS

Standardize

- SOP updates
- Metrics
- Training

61 TO 90 DAYS

Improve

- Dashboard
- Vendor handoff
- Exception review

90 PLUS DAYS

Scale

- Automation
- Operating model
- Benefits review

Decision log

DECISION	RECOMMENDATION	STATUS
Priority set	Focus first wave on eight high priority gaps.	Approve
Governance	Review gap register biweekly.	Schedule
Metrics	Create benefit baseline.	Required
Scale	Defer automation until process stabilizes.	Hold

Open questions

- Which gaps are true blockers?
- Who owns each workstream?
- What evidence proves closure?
- Which actions need funding?

The analysis gives leaders a focused action plan instead of a long list of findings.
