

SAMPLE DELIVERABLE

SOP And Process Package

A practical operating package that documents the process, roles, steps, rules, exceptions, controls, and handoffs needed for repeatable work.

CLIENT PRIVACY

Client names and identifying details are anonymized.

DELIVERABLE TYPE

SOP, process map, RACI, control checklist, exceptions, and rollout guide.

TYPICAL BUYER

Operations leaders, service teams, delivery managers, and process owners.

SITUATION

The work was getting done, but not consistently.

Teams followed different handoffs, used different templates, and interpreted exceptions differently. Leaders needed one clear operating standard.

OPERATING ISSUE

Repeatable work depended too much on individual knowledge.

CONTROL RISK

Inconsistent handoffs created delays, rework, and avoidable escalation.

PROCESS DISCIPLINE

The package creates one agreed process view, with steps, owners, controls, and exception handling.

PROCESS STEPS

16

Sequenced from intake to closure.

ROLES CLARIFIED

8

Mapped in RACI and handoff rules.

CONTROL POINTS

12

Added at high risk handoffs.

EXCEPTIONS

10

Documented with routing rules.

Adopt the SOP as the controlled operating baseline and review exceptions after the first 30 days of use.

SOP step table.

The SOP table gives teams the operating detail needed to execute consistently.

STEP	ACTION	OWNER	INPUT	OUTPUT
1	Receive request and confirm channel.	Intake coordinator	Email, form, or portal request.	Request record.
2	Check minimum information.	Intake coordinator	Business goal, audience, due date.	Complete or returned intake.
3	Classify request type.	Process lead	Request summary.	Category and priority.
4	Assign owner.	Team lead	Category and workload.	Named owner.
5	Review supporting files.	Assigned analyst	Documents and notes.	Input quality assessment.
6	Identify missing context.	Assigned analyst	Input assessment.	Clarification questions.
7	Draft output.	Assigned analyst	Source materials.	Draft deliverable.
8	Perform quality check.	Senior reviewer	Draft deliverable.	Reviewed output.
9	Resolve open issues.	Assigned analyst	Review notes.	Updated deliverable.
10	Send client ready output.	Delivery owner	Final deliverable.	Delivered package.
11	Record status and credits.	Operations admin	Delivery record.	Updated account history.
12	Capture feedback.	Client lead	Client response.	Improvement note.
13	Close request.	Operations admin	Approved deliverable.	Closed record.

How this creates value

- Reduces variation across staff.
- Protects quality at handoff points.
- Makes training faster.
- Creates audit friendly evidence.

What this prevents

- Unclear ownership.
- Hidden tribal knowledge.
- Repeated escalation.
- Inconsistent client experience.

End to end operating flow.

The process view keeps the SOP easy to understand before readers go into step detail.

A useful SOP is not just a procedure. It is a practical operating model for consistent client delivery.

Controls and exception rules.

Exception rules tell staff what to do when the process cannot follow the happy path.

EXCEPTION	TRIGGER	OWNER	REQUIRED ACTION
Incomplete intake	No business goal or target audience.	Intake coordinator	Return for clarification.
Sensitive files	Files appear confidential or regulated.	Delivery owner	Confirm NDA and handling path.
No credits	Client balance is zero.	Operations admin	Pause request and send top up path.
Urgent work	Client requests faster turnaround.	Team lead	Confirm feasibility and scope tradeoff.
Custom scope	Request spans multiple teams or unclear outcomes.	Senior reviewer	Route to custom advisory.
Quality concern	Client challenges output.	Delivery owner	Open revision review.

Training

- Role guide
- Example requests
- Quality checklist

Governance

- Owner
- Review cycle
- Exception log

Measurement

- Cycle time
- Rework
- Client feedback

SOP rollout roadmap.

WEEK 1

Validate

- Confirm process
- Review roles
- Check exceptions

WEEK 2

Train

- Walkthrough
- Publish job aid
- Answer questions

WEEK 3

Use

- Run first cycle
- Log exceptions
- Track gaps

WEEK 4

Improve

- Review metrics
- Update SOP
- Confirm baseline

Decision log

DECISION	RECOMMENDATION	STATUS
SOP owner	Assign one accountable process owner.	Required
Exception log	Track exceptions for 30 days.	Approve
Training	Run walkthrough before rollout.	Schedule
Review cycle	Review monthly during first quarter.	Control

Open questions

- Who owns future SOP changes?
- Which exceptions require approval?
- What metrics show the process is working?
- Where is the approved SOP stored?

The SOP package gives teams a clear operating baseline that can be trained, measured, and improved.
