SAMPLE DELIVERABLE

Stakeholder Synthesis Pack

A structured synthesis that turns stakeholder interviews, workshops, and written feedback into themes, needs, conflicts, decisions, and action priorities.

CLIENT PRIVACY

Client names and identifying details are anonymized.

DELIVERABLE TYPE

Stakeholder map, themes, needs analysis, conflict view, decision log, and action register.

TYPICAL BUYER

Program leads, product owners, transformation offices, and consulting teams.

SITUATION

Stakeholders were talking about the same problem in different ways.

Feedback was rich but fragmented. Leaders needed to know what stakeholders agreed on, where they disagreed, what decisions were needed, and what could move forward.

SYNTHESIS ISSUE

Input volume was high, but themes and decisions were unclear.

DELIVERY RISK

Unresolved stakeholder conflicts could appear later as scope changes.

ALIGNMENT INDEX

Themes are clear, but several stakeholder conflicts require leadership direction.

STAKEHOLDER GROUPS

9

Grouped by influence and impact.

THEMES

11

Consolidated from interviews and notes.

DECISION POINTS

14

Assigned to owner groups.

CONFLICTS

6

Need resolution before final scope.

Use the synthesis to confirm shared priorities, resolve conflicts, and protect delivery scope before detailed build work.

Stakeholder theme and decision table.

The table separates themes, stakeholder needs, tensions, and required decisions.

THEME	STAKEHOLDER NEED	TENSION	DECISION NEEDED
Speed	Faster request review and clear status updates.	Teams disagree on acceptable turnaround.	Define service targets by request type.
Clarity	Plain language requirements and decisions.	Some teams prefer detailed technical notes.	Agree deliverable format by audience.
Ownership	Named owner for decisions and approvals.	Current ownership crosses teams.	Assign approval roles.
Traceability	Ability to see why decisions were made.	Notes are stored in different places.	Set decision log standard.
Flexibility	Support for unusual request types.	Too much flexibility can create scope creep.	Define custom scope trigger.
Security	Confidence in file handling.	Users vary in sensitivity expectations.	Confirm private workspace and NDA path.
Reporting	Visibility into demand and delivery progress.	Metrics are not consistently defined.	Approve dashboard measures.
Budget	Predictable cost for recurring support.	Large requests may exceed standard plan.	Define credit and custom scope rules.
Adoption	Easy process for busy teams.	New intake can be seen as friction.	Create quick start guidance.
Quality	Senior review before outputs are sent.	Turnaround expectations may pressure review.	Protect quality gate.
Escalation	Clear path when a request is blocked.	Escalation rules are informal.	Define blocker and escalation criteria.

How this creates value

- Turns feedback into decisions.
- Shows alignment and conflict clearly.
- Protects delivery scope.
- Gives leaders a practical action list.

What this prevents

- Confusing loud feedback with priority.
- Hiding stakeholder conflict.
- Starting build work before decisions.
- Losing interview insights.

Stakeholder influence and impact map.

The map helps decide who must approve, who must be engaged, and who needs targeted communication.

GROUP	ENGAGEMENT NEED	MESSAGE
Sponsor	Decision approval.	Resolve scope and funding choices.
Operations	Workflow validation.	Confirm real world fit.
Technology	Feasibility review.	Confirm integration and controls.
End users	Adoption input.	Make process easier to use.
Finance	Cost and benefit review.	Validate business case.

Stakeholder synthesis is most valuable when it shows what must be decided, not just what people said.

Decision and conflict management.

The pack identifies conflicts early and translates them into decision items.

CONFLICT	WHY IT MATTERS	OWNER	RECOMMENDED ACTION
Speed versus quality	Fast turnaround can weaken review.	Sponsor	Set targets by complexity.
Flexible intake versus scope control	Open requests can expand effort.	Operations lead	Define custom scope trigger.
Detailed docs versus executive summaries	Different audiences need different outputs.	Delivery lead	Use tiered deliverable format.
Security comfort levels	Sensitive materials need clear handling.	Security owner	Publish file handling note.
Metrics ownership	No one owns benefit tracking.	Program lead	Assign metric owners.
Approval authority	Signoff delays can block delivery.	Sponsor	Confirm approval matrix.

Interview evidence

- Themes
- Quotes summarized
- Needs

Conflict evidence

- Tensions
- Tradeoffs
- Decision owners

Action evidence

- Actions
- Owners
- Due dates

Stakeholder alignment roadmap.

STEP 1

Capture

- Review notes
- Group stakeholders
- Extract themes

STEP 2

Synthesize

- Find patterns
- Separate conflicts
- Draft insights

STEP 3

Decide

- Assign owners
- Resolve tradeoffs
- Confirm priorities

STEP 4

Communicate

- Prepare summary
- Share actions
- Track decisions

Decision log

DECISION	RECOMMENDATION	STATUS
Priority themes	Approve top five shared priorities.	Approve
Conflicts	Resolve six conflict points before final scope.	Required
Communication	Use audience specific summary.	Approve
Follow up	Review unresolved items weekly.	Schedule

Open questions

- Which stakeholders must approve final scope?
- Which needs are non negotiable?
- Which conflicts can be deferred?
- Who owns communication back to stakeholders?

The synthesis gives teams a clear picture of what stakeholders need, where alignment exists, and what must be decided next.
